

ANTI-FUNGAL NAIL SOLUTION

5 ml

**Tested by an independent laboratory accredited by the
Medicines Control Council and proven to eliminate:**

- **Dermatophytes**
- **Yeast**
- **Mould**
- **Fungi**
- **Bacteria**

ONYCHOMYCOSIS (Nail Fungal Infections) are the most common of all nail infections.

Toe nails are infected far more than finger nails as blood circulation in the toes is lower than the finger therefore providing less immune protection to prevent infection.

Nail fungal infection risk increases as people get older and tends to be higher in diabetics.

Risk factors include damp communal areas (eg gyms, pools), poor foot hygiene, diabetes, poor blood circulation, nail trauma and Athletes Foot (Tinea Pedis)

Nail fungal infections can cause pain, discomfort, unsightly disfigured nails and when left untreated can result in reduced quality of life.

DIRECTIONS FOR USE:

At bedtime, apply a coating to the effected nails and under the nail tip. Allow to dry.
Do not apply shortly after bath or shower. Nail must be **TOTALLY** dry to absorb solution.

Sealed in a tamperproof 5ml glass vial with a brush applicator – no filing of nail required
