

ARTIFICIAL LAWN ANTI-BACTERIAL SPRAY

750 ml

Intestinal bacteria commonly found in dogs and cats (regardless of the type of food they consume) includes E-coli which refers to a wide range of bacteria that can cause various diseases, including pneumonia, urinary tract infections, and diarrhoea in children and adults.

When pet's faeces are removed from artificial lawn, a "fecal residue" containing E-coli can remain on the area. Due to the nature of the lawn base the fecal residue cannot be "washed through". The E-coli needs to be eliminated to prevent possible illness.

Toddlers and children are high risk candidates for E-coli infection as their hands can make contact with the fecal residue when playing on the lawn and the bacteria is transferred if they put their hands in their mouth thereafter.

Proguard Natura Anti-Bacterial Spray is an Eco and Child Friendly product and has been tested by an accredited Medicines Control Council laboratory and proven to eliminate E-coli on contact therefore reducing risk of contracting E-coli when walking or playing on the lawn.

The product can assist with unpleasant odour of pet urine that pools on the artificial lawn base.
